Clinical Interpretation

HbA1c 7.8% indicates suboptimal glycemic control (target <7.0% for most adults).
Fasting glucose 142 mg/dL is consistent with the elevated HbA1c.
eGFR 62 mL/min/1.73m2 suggests mild chronic kidney disease (CKD stage 2).
LDL 118 mg/dL exceeds the guideline target for high-risk patients (<70 mg/dL).
CBC within normal limits.
